

Note It Text Editor

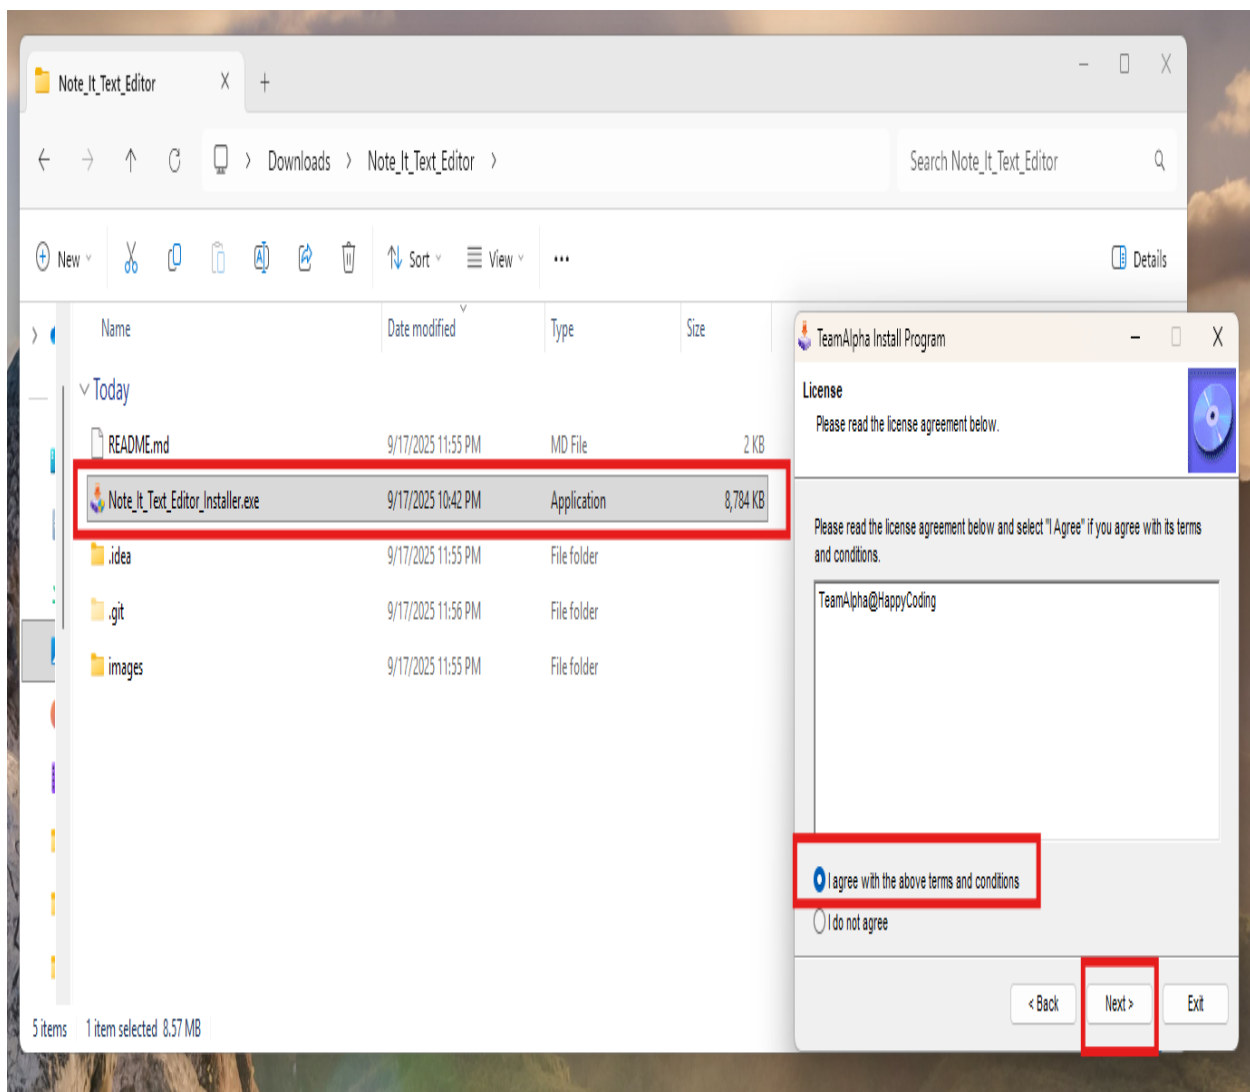

Note It is a lightweight text editor, with an auto-paste facility, and a topmost view option. We can paste the copied text automatically by selecting the Auto Paste option. This option will also work even when the application is in minimized mode. We can use the `my_file` and `private_file` options for storing information and passwords.

Note It provides a font style picker and color picker for font and background color.

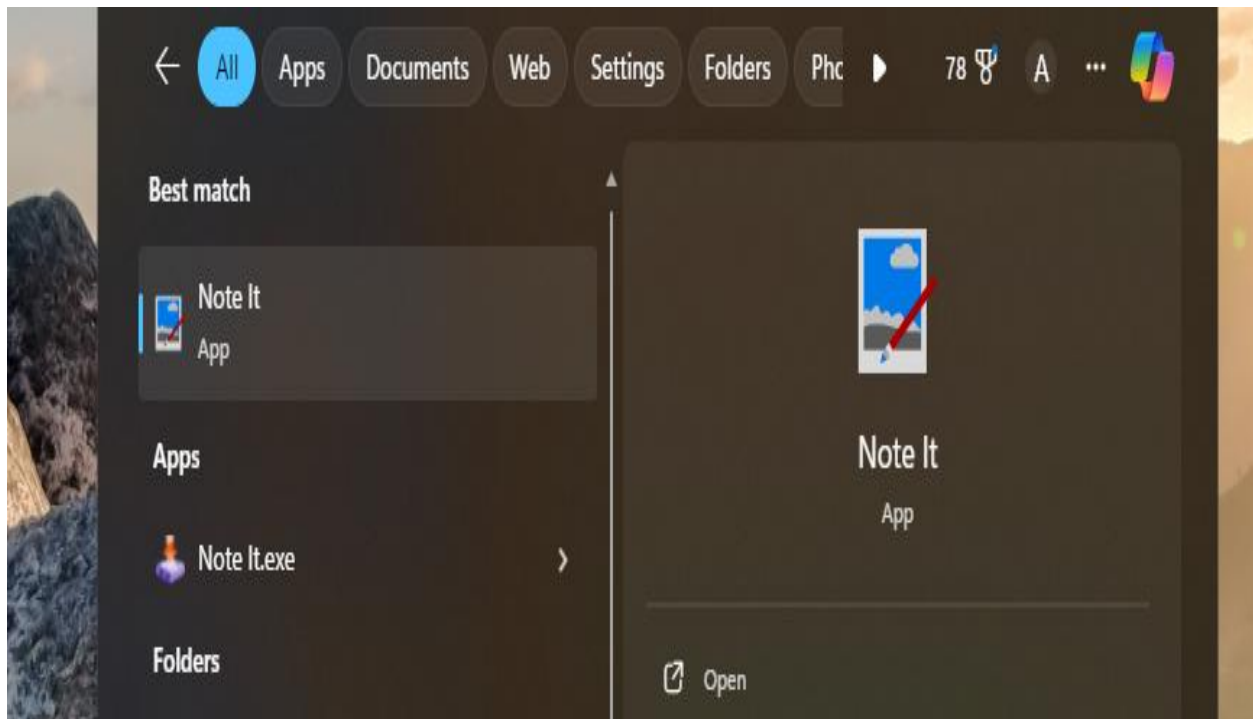

Note It is very helpful to copy selected contents from a PDF or website, and also useful to take notes while watching a video lecture.

Note It provides a quick launching option to open an app using a launching button, and it also allows you to open multiple **Note It** instances.

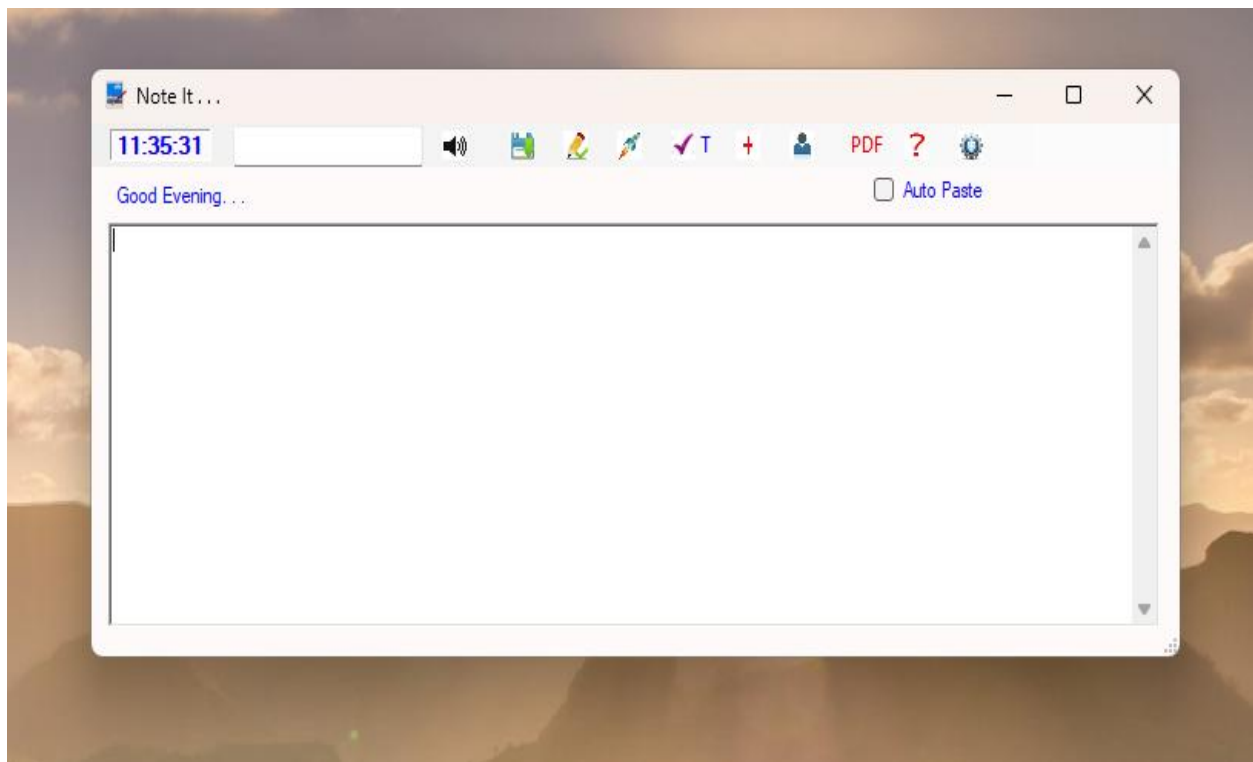

Install Note It Run the installer file `Note_It_Text_Editor_Installer.exe`

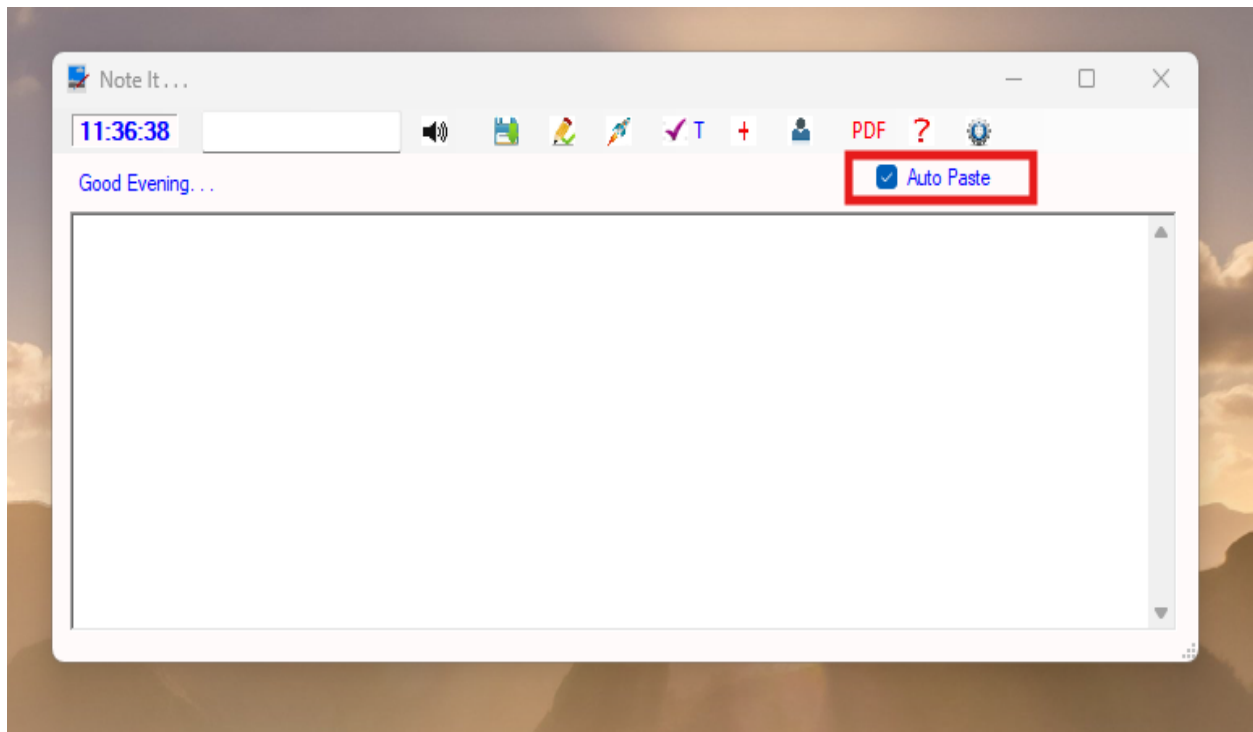

After installation search for Note It

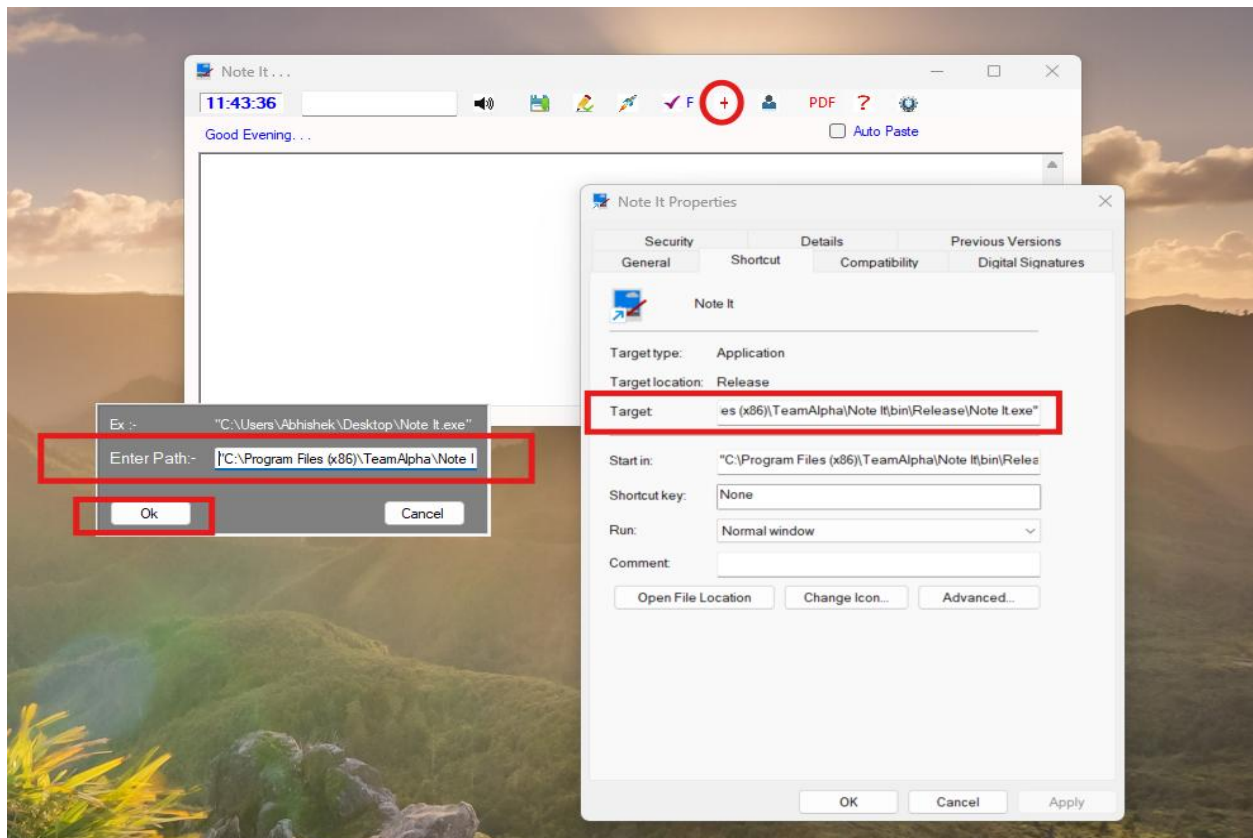

Home Page

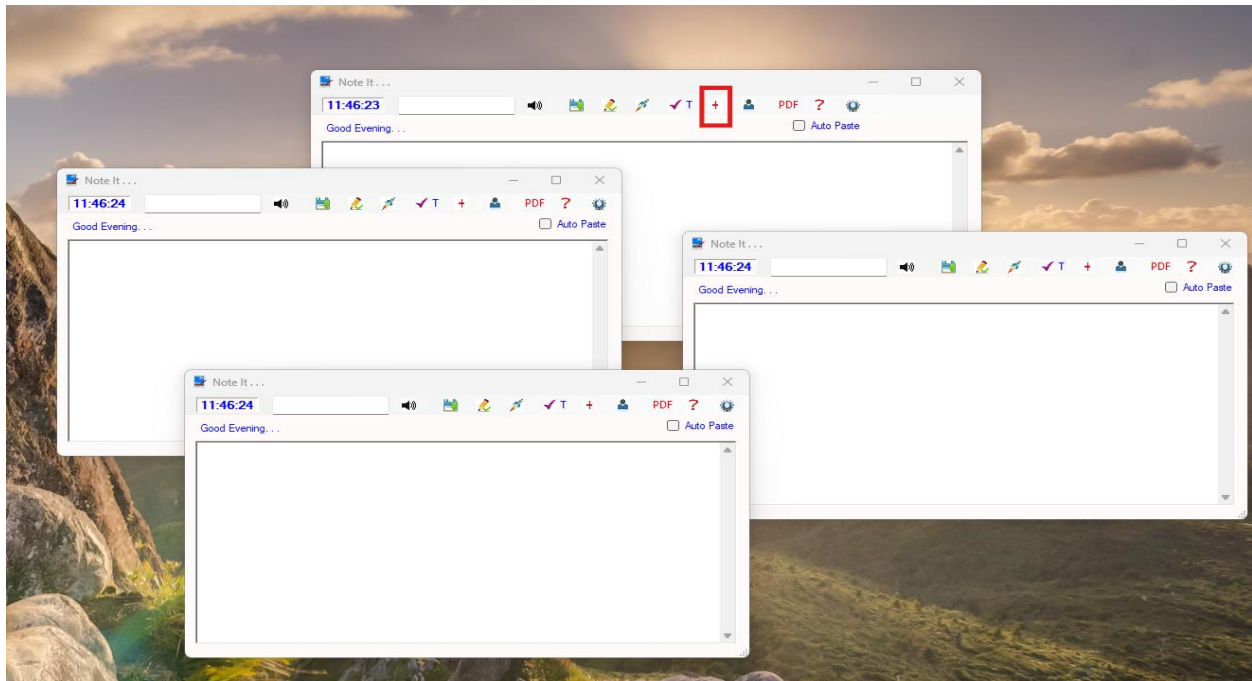

Auto Paste Option

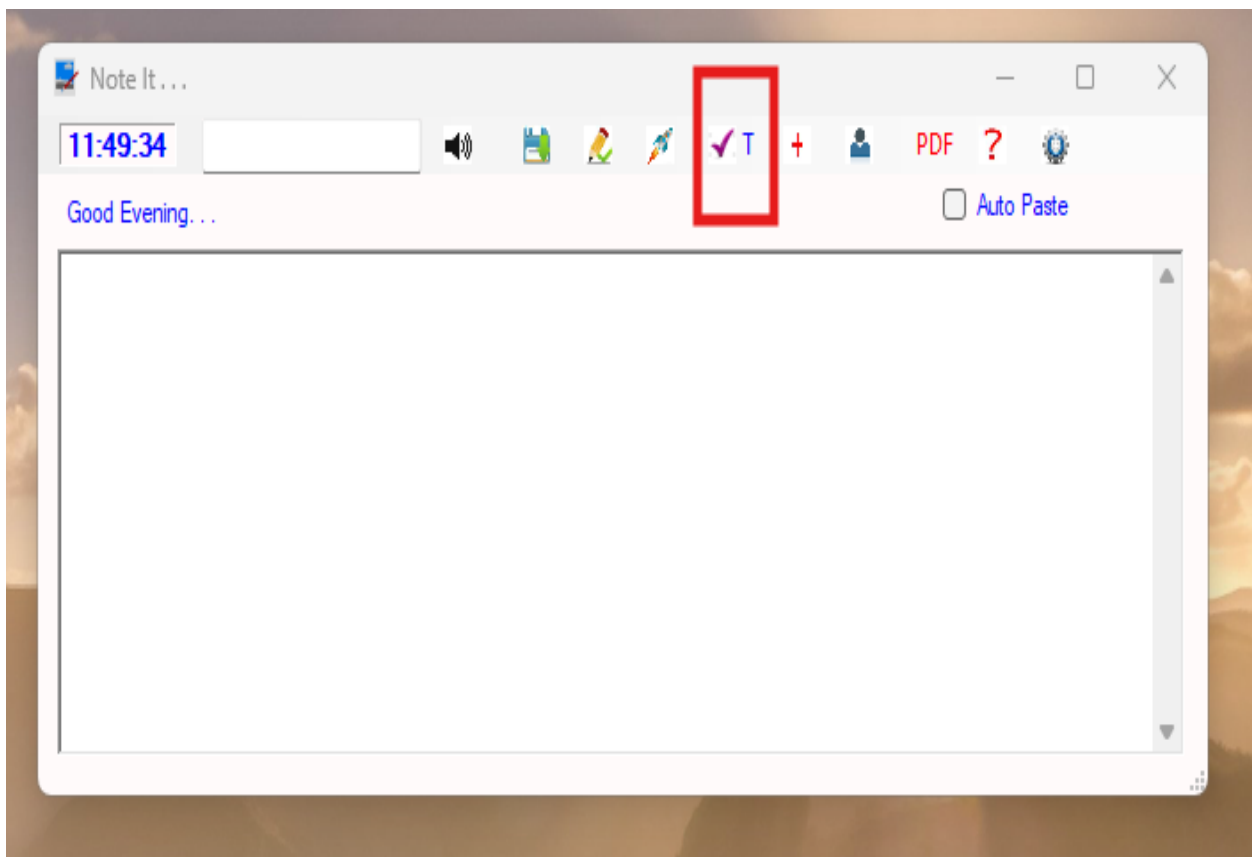

Setup to launch multiple Note It instances

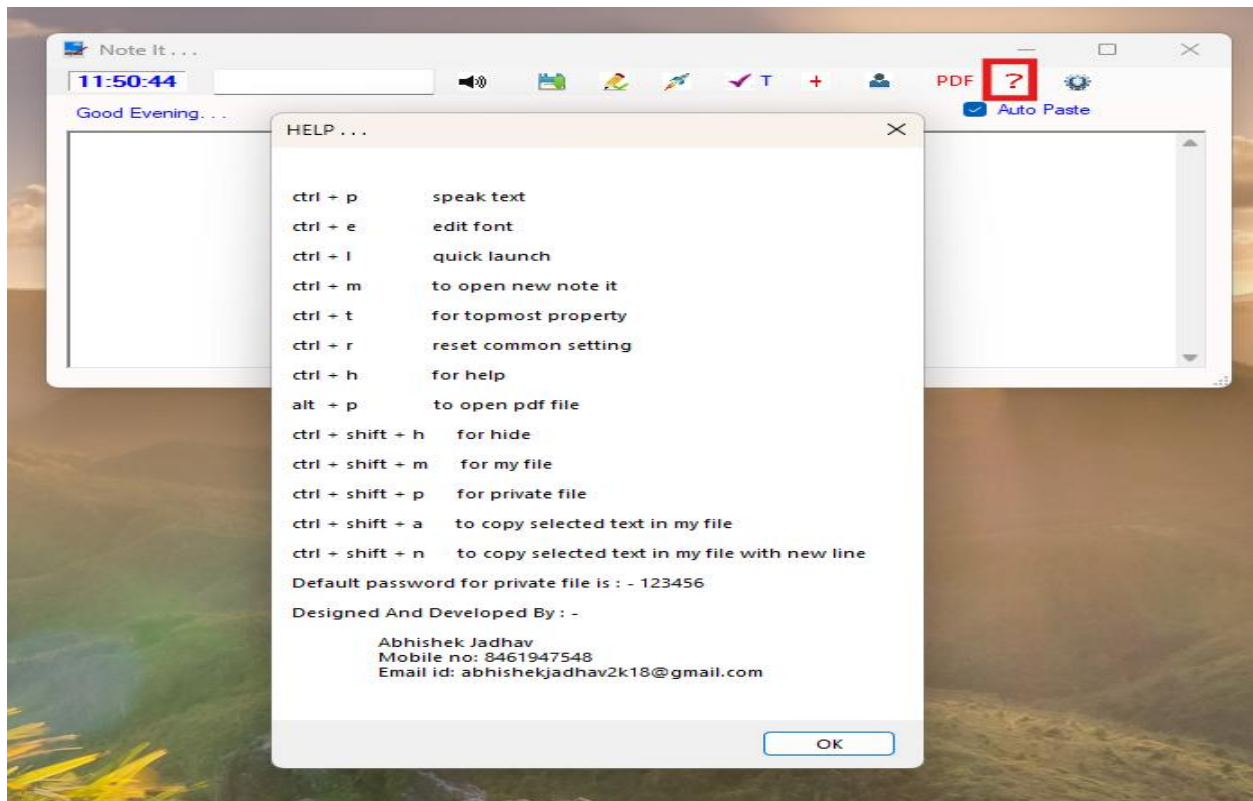

After that we can use this option to launch multiple instances

Top view option, select T to enable
